Unit 2 Staying healthy

We look at the circulatory, respiratory and urinary systems which facilitate the exchange, transport and removal of materials for efficient body functioning. Regular health checks can assess the risk of future medical issues and monitor current medical problems for the development of individual treatment plans in order to improve quality of life.

Students investigate these systems through practical activities including real and virtual dissections. Students analyse data and are encouraged to use information and communication technology to gather and interpret data and communicate their findings in a variety of ways.

 <p>Prerequisites Competency with the English language</p>	 <p>Type of Assessment 40% Investigation 30% Project 10% Practical Assessment 20% Supervised Written Assessment</p>
 <p>Year of Study Year 11</p>	 <p>Costs \$30</p>
